## What is claimed is:

1 1. A method for manufacturing a ferrule comprising the steps of: immersing a negative electrode line and a positive electrode in an electroforming fluid in 2 an electroforming bath; 3 4 disposing at least one dummy line in the vicinity of the negative electrode line; depositing metal on the negative electrode line by electroforming to form a cylindrical 5 electroformed element in such a manner that the negative electrode line and the dummy line are 6 7 integrally embedded in the electroformed element; and taking out at least the dummy line from the electroformed element to form a through hole 8 for inserting an optical fiber, to obtain the ferrule made of the electroformed element. 9 2. The method for manufacturing a ferrule according claim 1, wherein the dummy line to 1 be taken out from the electroformed element is subjected to an insulation treatment. 2 1 3. The method for manufacturing a ferrule according to claim 1, wherein the dummy line 2 to be taken out from the electroformed element is made of an electrical insulating material. 4. A method for manufacturing a ferrule comprising the steps of: 1 2 immersing a negative electrode line and a positive electrode in an electroforming fluid in

disposing at least one dummy line in the vicinity of the negative electrode line and

9475/0M771 - 23 -

disposing at least one positioning line in the vicinity of the dummy line;

an electroforming bath;

3

4

5

- depositing metal on the negative electrode line by electroforming to form a cylindrical electroformed element in such a manner that the negative electrode line, the dummy line, and the positioning line are integrally embedded in the electroformed element; taking out at least the dummy line, out of the negative electrode line and the dummy line, from the electroformed element to form a through hole for inserting an optical fiber; and
- taking out the positioning line from the electroformed element to form a positioning hole used when the ferrule is fitted into another ferrule, thereby to obtain the ferrule made of the electroformed element.
- 5. The method for manufacturing a ferrule according to claim 4, wherein:
- the ferrule is used as a socket; and

3

treatment.

- a plug pin of a second ferrule is inserted into the positioning hole of the ferrule.
- 6. The method for manufacturing a ferrule according to claim 4, further comprising:
- a plug pin fixedly attached to the positioning hole, wherein said plug pin is to be inserted into and fitted to a positioning hole of a second ferrule.
- 7. The method for manufacturing a ferrule according to claim 4, wherein the dummy line and the positioning line to be taken out from the electroformed element is subjected to an insulation

9475/0M771 - 24 -

- 8. The method for manufacturing a ferrule according to claim 4, wherein the dummy line and the positioning line to be taken out from the electroformed element is made of an electrical insulating material.
  - 9. A method for manufacturing a ferrule comprising the steps of:

1

6

7

8

11

12

13

- 2 immersing a negative electrode line and a positive electrode in an electroforming fluid in 3 an electroforming bath;
- disposing at least one dummy line in the vicinity of the negative electrode line and disposing at least one positioning line in the vicinity of the dummy line;
  - depositing metal on the negative electrode line by electroforming to form a cylindrical electroformed element in such a manner that the negative electrode line, the dummy line, and the positioning line are integrally embedded in the electroformed element;
- taking out at least the dummy line, out of the negative electrode line and the dummy line, from the electroformed element to form a through hole for inserting an optical fiber; and
  - taking out the positioning line from the electroformed element to form a positioning hole used for adjusting a position of the electroformed element when an outside shape thereof is machined, thereby to obtain the ferrule made of the electroformed element.
- 1 10. The method for manufacturing a ferrule according to claim 9, wherein the dummy line 2 and the positioning line to be taken out from the electroformed element is subjected to an insulation 3 treatment.

9475/0M771 - 25 -

- 1 11. The method for manufacturing a ferrule according to claim 9, wherein the dummy line
- 2 and the positioning line to be taken out from the electroformed element is made of an electrical

3 insulating material.
